## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1, 2, 4-14, and 16-34 are allowed.

The following is an examiner's statement of reasons for allowance:

Independent claims 1, 13, and 26 each require performing a plurality of image adjustment actions according to a given fuzzy command, and if the adjusted image does not meet the user's expectation, further modifying the image based on the performed adjustment actions. In an Advisory Action mailed 17 July 2008, the examiner maintained a rejection in view of Greenberg, using a broad interpretation of the word "fuzzy" arguing that the term "fuzzy" was not specifically described in the specification. However, a review of the specification reveals that "fuzzy commands" are differentiated from "specific commands" where "specific commands" identify a specific operating action (e.g. "increase the brightness"). A "fuzzy command", however, as defined by both the claims and specification, performs a plurality of adjustment actions on an image (e.g. adjusting brightness, color, etc.). It is clear then that the cited portions of Greenburg do not disclose a "fuzzy command", because the command disclosed by Greenburg ("zoom image") is equivalent to the claimed specific command because "zoom image" identifies a specific operating action (i.e. zooming the image). Thus, identifying a fuzzy command wherein said fuzzy command performs a plurality of adjustment actions corresponding to said voice command is not taught or suggested by Greenburg.

Upon further search, an additional reference that teaches fuzzy commands was found (Tzirkel-Hancock, U.S. Patent 6,133,904), however, this reference does not teach or suggest further modifying the image based on the performed adjustment actions if the adjusted image does not meet the user's expectations. Tzirkel-Hancock discloses an image manipulation device wherein user's can input a "fuzzy" type command (e.g. "make this more blue"). Upon receiving such a command the system performs a plurality of actions such as identifying the color and intensity of selected pixels and adjusting the color and hue of the selected pixels in a manner that would make the selected pixels appear "more blue" to the user (see column 33, line 1 to column 34, line 16 for details). However, Tzirkel-Hancock does not perform any additional processing on the image once the image has been adjusted according to the fuzzy command. Thus, Tzirkel-Hancock do to disclose or suggest further modifying the image based on the performed adjustment actions if the adjusted image does not meet the user's expectations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Junqua et al. (U.S. Patent 6,415,257) disclose a natural language parser for television command entry. Ando et al. (U.S. Patent 5,600,765) disclose a multi-modal system that allows fuzzy commands such as "move this here". Rozak et al. (U.S. Patent 5,748,191) disclose a system for associating a plurality of actions with a single voice command. Nolting (U.S. Patent 6,718,308) disclose a system that allows a user to adjust an images brightness, tint, etc., using voice commands.
